5 Days to Georgia Presidential Primary, Trump Pulls Away from GOP Field; Clinton Buries Sanders; In November Head-To-Head

General Election Match-Ups, Republican Nominee, Whomever It Is, Beats Either Democrat; 16 Peach State Electoral Votes Stay Red: Donald Trump consolidates his gains from Nevada, South Carolina and New Hampshire, and marches through Georgia like Sherman's army, according to SurveyUSA polling conducted exclusively for TEGNA and WXIA-TV in Atlanta. Today, 5 days till votes are counted and with many GA ballots already returned, it's Trump 45% (1 point less than the 46% Trump got in Nevada), Marco Rubio 19%, Ted Cruz 16%, others further back. Trump is backed by 51% of "strong Republicans," 47% of conservatives and 46% of moderates. He is backed by 57% of voters with a high-school education, 52% of voters earning less than \$40,000 a year, 49% of seniors. Rubio runs strongest among affluent Republican primary voters and voters in greater Atlanta, but Rubio does not exceed the 25% support level in any voter demographic, so it will be hard for him to catch Trump, barring something completely unforeseen. Cruz runs strongest among Republican primary voters who are "very conservative" and who are "falling behind" financially. Cruz does not reach 30% support in any demographic group --- including evangelical Christians, where Trump beats Cruz 2:1, and including members of the Tea Party, where Trump beats Cruz 5:2. In the Democratic primary, Hillary Clinton defeats Bernie Sanders 66% to 27%. Though Sanders and Clinton run almost even among GA's white Democratic primary voters, Clinton leads 4:1 among both African Americans and Hispanics. Though Sanders makes a show of it among "very liberal" voters, drawing to within 3 points of Clinton, Clinton is at 65% among moderates and at 73% among conservative Democrats. Looking ahead to November, Trump and Rubio run slightly stronger than Cruz, but in every case, Republicans win the state in hypothetical head-to-head match-ups. "Today" it's: * Trump 50%, Clinton 41% --- a 9-point Republican advantage.

- * Trump 49%, Sanders 41% --- an 8-point Republican advantage.
- * Rubio 50%, Clinton 43% --- a 7-point Republican advantage.
- * Rubio 49%, Sanders 41% --- an 8-point Republican advantage.
- * Cruz 49%, Clinton 42% --- a 7-point Republican advantage.
- * Cruz 48%, Sanders 42% --- a 6-point Republican advantage.

Filtering: SurveyUSA interviewed 1,650 Georgia adults 02/22/16 through 02/23/16. Approximately half of the interviews were completed before the results of the Nevada Republican caucuses were known, the other half after. Of the adults interviewed, 1,454 were registered to vote. Of the registered voters, SurveyUSA identified 1,261 voters who were likely to vote in the 11/08/16 general election, 684 voters who had either already voted in the Republican presidential primary or who were certain to do so before the deadline, and 501 voters who had already voted in the Democratic presidential primary or who were certain to do so before the deadline. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (53% of registered voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (47% of registered voters) were shown a questionnaire on their smartphone, tablet or other electronic device. In 2012, Mitt Romney defeated Barack Obama by 8 percentage points to capture Georgia's 16 electoral college votes with 53% of the ballots cast.

** Too few respondents of this type were interviewed for this data to be meaningful.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPPI). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
